### Learn From Others

Don J. Entertained us at the last meeting as he recounted a flight that ended in a sweet conclusion, but could have sent him up a certain creek without a paddle. I can't do justice to the delivery that Don gave, but here goes...

A small group of planes, including Don, Gary and Gary were out committing some aviation and completed the first leg of a flight. Upon starting out on the next leg, Don noticed his tire was starting to lose air. Thinking he may be able to complete the flight in safety, he took off. He didn't realize that a passenger had joined him. Murphy had decided to come along for the ride and what a ride it was.

Murphy's Law—Anything bad that can happen, will happen, and at the worst possible time.

A few minutes into the flight, it suddenly got very quiet. If you are a pilot, you know that propellers are put on airplanes to keep the pilot cool. When they stop spinning while the plane is still in the air, watch the pilot start to sweat. Well, Don started perspiring...Searching for the best alternative landing spot revealed what looked from the sky to be a nice flat field. Committing to the approach, and coming in for the landing revealed it was a freshly plowed and Dark Brown strip of land.

Bleeding off as much airspeed as he could to limit his roll, he was able to get it on the ground, but at the end, experienced a ground loop. Remember that leaking tire... Well it wasn't leaking any more and was loose on the rim.

Now, what about the other guys he was flying with? Well, they fouled him and Gary A. was able to set up a landing to get Don some assistance, but not having seen him land, he could not figure why he had decided to land the direction he was facing.

So Gary A. gets on the ground and they were able to determine that the engine out was due to a decade + pulse line that finally gave out. Here's a hint, "If the pulse line has turned Black from oil and heat, it's time to replace it."

While they were talking about finding the land owner and laying out the takeoff, Gary was able to recognize the fact that the field had manure spread over it to "Sweeten" it.

After talking with the land owner and setting up a time to come back with the repaired tire, Don left with his Wife, whom had driven over to pick him up.

To make a long story short, he got the tire back on the airplane, after figuring out where the plane was, and flew it home with out further incident

Moral of the story, we all try to stretch our maintenance budget, but things have a usable life, and the time to replace them is when your aircraft is home in it's hanger.

### Final Meeting of the Year

November is the last meeting of 2013. This is also Election of officers. If anyone is interested in running for an office, make sure you attend this meeting. I would also like to pass the torch of the News Letter Editor Position. Anyone interested in the position should contact me.

### Event Listing for the Club

John has started e-mailing the club in regards to flying events. The e-mails come from "North Coast" with an address of nclflyers@yahoo.com. Please make sure to add this to your e-mail contacts so it doesn't hit your Spam filter.

He also needs your help in supplying events to the list. Per his e-mail...

Remember, we depend on all of you send information to us. Thanks all who have sent information! We are trying to keep it simple.

Please send any additional information to:  
NCLFlyers@yahoo.com

It would be very helpful if you could put it into the following format, so we can.

=====  
Date start time-end time (Eastern time, military format)  
Airport ID Airport name  
Name of event  
Comments

-  
Any time you hear of a flying event, make sure to drop John a note.

### November Activities and Beyond

11/09 18:00
